### Abstract

There is one to one correspondence relationship between the outline of the Earth's inner core and that of human head. That is why there are so many concave face individuals existing around us due to the evolution limitation of the Earth's the inner core. Compared with the ancient ancestors, the shrinking of face of modern humans have indeed sacrificed the space of teeth silently which leads to the problems of teeth that most people have to face today. Therefore, the problems of teeth will get severe in the future due to the profound evolution of human head induced by the serious competition of globalization of human beings.

**Keywords:** Wisdom Tooth, Concave Face Type, Convex Face Type, Homo Sapiens, Tiger Tooth, Earth's Inner Core

### Introduction

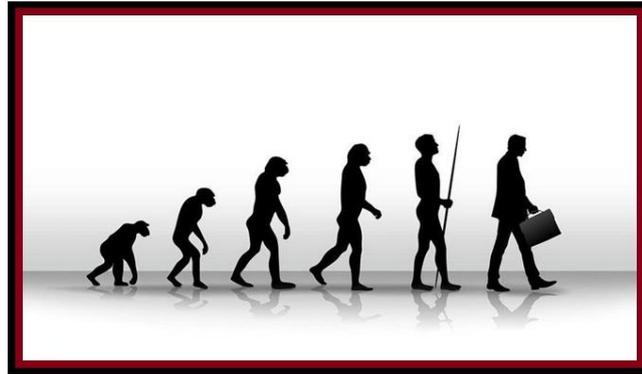

Have you ever encountered problems of teeth in life, such as the problem of tiger teeth or wisdom teeth? That is actually the default mark of human race as top species evolving on the Earth that never happens on other animals. The evolution route of human race indicates that human face had to be shrinking due to the expanding of human brain which led to the problems of teeth naturally and the existence of concave face individuals in large quantity.

What's more, the outline of human head corresponds to that of the Earth's inner core. Concave face individuals imply that human race as the top species has reached the top ceiling of evolution on the Earth.

### Text

#### The Human Evolution Route [1]

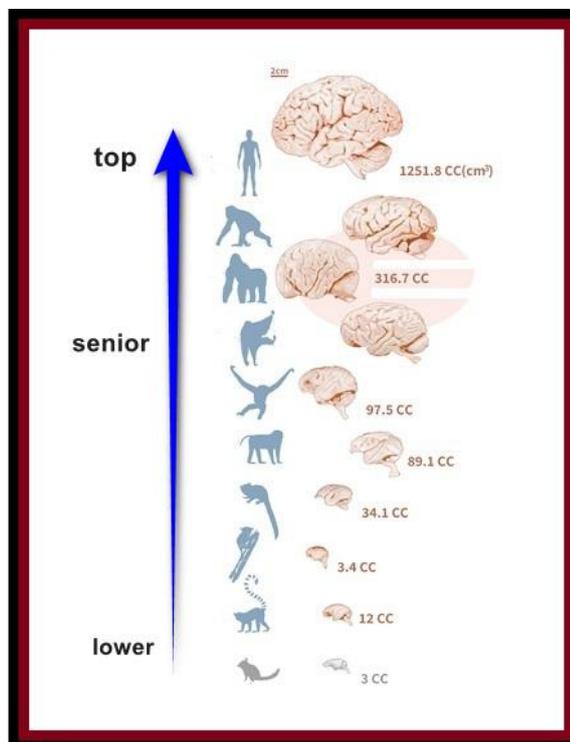

It is claimed by paleoanthropologists that human beings had evolved from their ancestors with the head characteristic of protruding mouth and lower brain volume. It is shown by Figure 1 as follows,

**Figure 1: The Human Evolution Route**

**The Brain Volume Comparison of Different Species from Lower to Top**

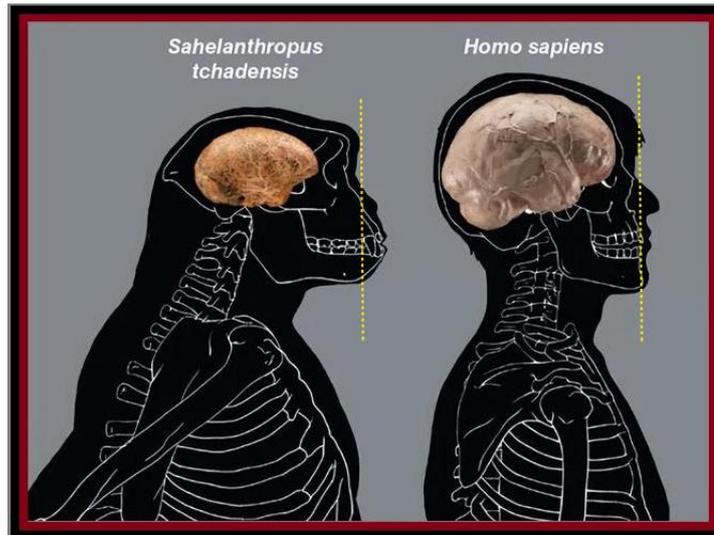

It is no doubt that human race is regarded as the top species due to the maximum brain volume locked in its upper head [2]. It is shown by Figure 2 as follows,

**Figure 2: The Brain Volume Comparison of Different Species from Lower to Top**

**The Outline of Head Comparison Between the Homo Sapiens and Other Species**

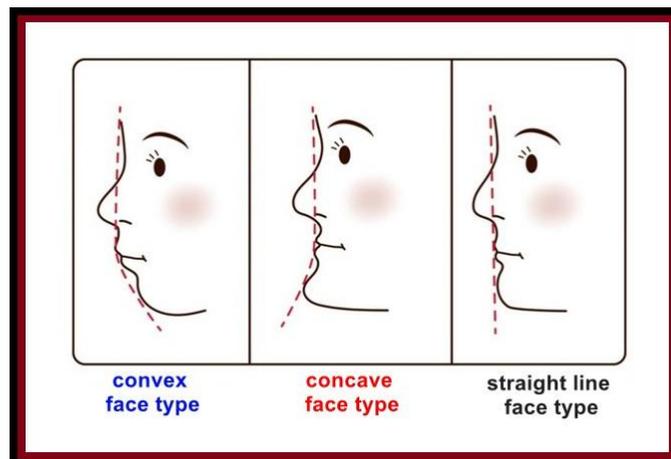

From the comparison of homo sapiens and other species, it could be concluded that their faces, especially their mouths, shrink obviously due to the expanding of their brain volume [3]. It is shown by Figure 3 as follows,

**Figure 3: The Outline of Head Comparison Between the Homo Sapiens and Other Species.**

### The Classification of Human Face Type

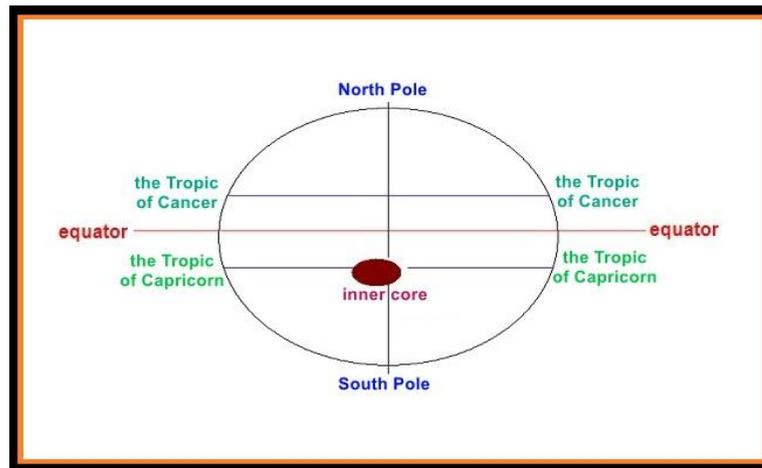

The human faces are usually divided into three types: convex face type, concave face type and straight-line face type [4]. It is shown by Figure 4 as follows,

**Figure 4: The classification of human face type.**

### The Outline of The Earth's Inner Core

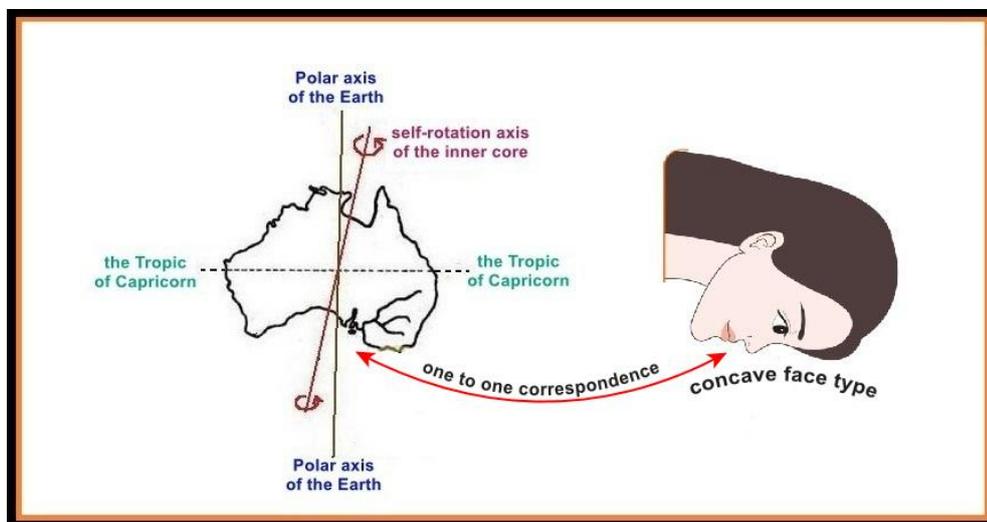

It is implied by the main island of the ancient Australian plate that the Earth's inner core lies in the Southern Hemisphere on the tropic plane of the Capricorn [5]. It is shown by Figure 5 as follows,

**Figure 5: The Outline of The Earth's Inner Core.**

**The One to One Correspondence Relationship Between the Earth's Inner Core and Human Head in Evolution**

There is a one to one corresponding relationship between the Earth's inner core and the human head in evolution. Exactly speaking, the concave surface on the bottom of the Earth's inner core corresponds to the concave face of human individuals. That is to say, the outline of the Earth's inner core is the top ceiling evolution of human heads. Large quantity of existing human individuals with concave faces implies that the evolution of human race has reached the edge of limitation. It is shown by Figure 6 as follows,

**Figure 6: The One to One Correspondence Relationship Between the**

**Earth's Inner Core and Human Head in Evolution.**

That might be the indeed reason why human race is regarded as the top species evolving on the Earth since the key characteristics of the celestial body are embodied in some default way.

**The Cases of Human Individuals with Concave Faces Shown in Real Life**

There have been lots of human individuals with concave faces in real life. For example: the founder Emperor of Ming Dynasty of China, Zhu Yuanzhang (1328-1398AD) and super billionaire Jack Ma and laugh-making star Zhao Benshan in China. It is shown by Figure 7 as follows,

**Figure 7: The Cases of Human Individuals with Concave Faces Shown in Real Life.**

### **The Problems of Teeth Are Induced by The Face Shrinking of Human Race**

Compared with ancient ancestors, modern human beings have to face the problems of teeth mostly due to the shrinking of faces, especially the shrinking of mouths that reduced the crowded space of teeth without their number decreased ever. It is shown by Figure 8 as follows,

**Figure 8: The Problems of Teeth to Be Faced by Modern Human Beings Mostly.**

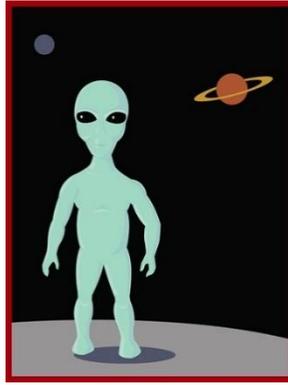

The universal problems of teeth are the tiger tooth (canine tooth) and the wisdom tooth (third molar) caused by the crowded space on their base (maxilla and mandible) [6,7].

However, with the severe competition of globalization of human beings, human brains in high frequency of use would be in a state of expanding tendency in large probability that would lead to an even further shrinking of faces. Therefore, it is reasonable to deduce that more and more people have to visit dentists frequently because of the problems of teeth in the near future.

### **Discussion**

#### **Could the extra-terrestrials be designed artificially and ideally?**

It seems that almost all the extra-terrestrials promoted in media are designed artificially and ideally. The extra-terrestrials could not exist in vacuo in the universe. They should reflect some characteristics of the celestial body from which they had evolved. It is shown by Figure 9 as follows,

**Figure 9: The Ideal Extra-Terrestrials.**

### **Would Human Race Become a Multiplanetary Species in The Universe in The Future?**

It is determined by the correspondence relationship between the Earth's inner core and human head in evolution that the Earth would be the unique celestial body in the universe to turn human's wishes into realities. The survival probability of human race by immigrating to other celestial bodies would be zero in large probability whenever it happens in the future. It could only be feasible ideally on computers to make human race become a multiplanetary species in the universe in the future.

It could be prevented from unrealistic fantasy only when the naked feet of human race touch the Earth frequently and intimately.

### **Conclusion**

It is no doubt that human race is the top species that evolved out of the Earth. Therefore, there should be some common features between the Earth and human race. That is to say, the outline of human head corresponds to that of the Earth's inner core. Based on the concave surface of the Earth's inner core, the concave faces of human individuals just imply the evolution top ceiling of human race in the universe.

Once leaving the Earth by immigrating to other celestial bodies, human race could not survive independently as highlighted before as it once accumulated on the Earth. The close and intimate relationship between the Earth and human race implies that the Earth should be the only base camp for it in the universe.
